Version: 2017-01

Revised edition no. 4
Revision date: 01/02/2017
Replaces previous editions

SECTION 1. Identification of the substance/mixture and of the company/undertaking

1.1 Product identifier

Commercial designation : COMPO Bleu Liquide

1.2 Relevant identified uses of the substance or mixture and uses advised against

Use of the substance/mixture : Plant protection product - additive to mark the treated areas

1.3 Details of the supplier of the safety data sheet

Company : COMPO EXPERT France
49, avenue Georges Pompidou
92593 LEVALLOIS-PERRET Cedex

Telephone : 09.82.55.28.56
E-mail address : fds-compo-expert@compo-expert.com

1.4 Emergency telephone number

ORFILA EMERGENCY CALLS (INRS, French Institute for Research and Security): 01 45 42 59 99

SECTION 2. Hazards identification

2.1 Classification of the substance or mixture

Classification of the substance or mixture according to Regulation (EC) No. 1272/2008:

Is not a hazardous mixture

2.2 Label elements

Labelling according to the REGULATION (EC) No. 1272/2008:

Hazard pictograms : None

Warning statement : None

Hazard statement : None.

Precautionary statement P102 - Keep out of reach of children.

P270 - Do not eat, drink or smoke when using this product.

EUH401 To avoid risks to human health and the environment, comply with the instructions for use.

SP1 Do not contaminate water with the product or its container. (Do not clean application equipment near surface water. Avoid contamination via drains from farmyards and roads.)

SPe3 To protect aquatic organisms respect an unsprayed buffer zone of 5 metres to surface water bodies.

2.3 Other hazards

The product may irritate the skin, respiratory tract or eyes.
No other known hazard at this time.

SECTION 3. Composition/information on ingredients

3.2 Mixtures

Hazardous components

Chemical designation	CAS number EC number Registration number INDEX number	Classification (67/548/EEC)	Classification (REGULATION (EC) No. 1272/2008)	Concentration [%]
Anionic triphenyl methane dye, aqueous solution C.I. Acid Blue 9 Bright blue dye (acid blue 9)	-	-	-	43.5 %

SECTION 4. First aid measures

4.1 Description of first aid measures

General instructions:	Remove contaminated clothing.
After inhaling:	In case of discomfort after inhaling vapours/aerosols: Fresh air, medical care.
After skin contact:	Wash thoroughly with soap and water.
After contact with the eyes:	Rinse thoroughly under running water for at least 15 minutes, keeping the eyelids open.
After ingesting:	Rinse mouth and drink plenty of water. Call a doctor.

4.2 Most important symptoms and effects, both acute and delayed

Symptoms	:	No particular reaction of the human body to the product is known.

4.3 Indication of any immediate medical attention and special treatment needed

Treatment	:	Symptomatic treatment (decontamination, vital functions), no specific antidote known.

SECTION 5. Firefighting measures

5.1 Extinguishing media

Recommended extinguishing media: spray water, extinguishing powder, foam

5.2 Special hazards arising from the substance or mixture

The vapours and (or) the decomposition products are irritating and (or) toxic. Gives off smoke/vapour. The substances and the substance groups mentioned can be released in the case of fire.

5.3 Advice for firefighters

Special protective equipment for firefighters	:	Specific Protective Equipment: Wear a self-contained breathing apparatus and a protective against chemical agents; Other information: Contaminated extinguishing water should be disposed of in accordance with the local official regulations. Protect sealed containers against heat (increase of pressure). Cool containers in danger of overheating with spray water.

SECTION 6. Accidental release measures

6.1 Personal precautions, protective equipment and emergency procedures

Very slippery ground in case of product spillage.

Individual precautions	:	Use personal protective clothing. Very slippery ground in case of product spillage. Avoid contact with skin, eyes, clothes. Do not inhale vapours/aerosols/spray mist. Use personal protective clothing. Information about Personal Protective Equipment: see chapter 8.

6.2 Environmental precautions

Environmental precautions	:	Retain contaminated water/fire extinguishing water. Do not discharge into drains/surface water bodies/underground water bodies.

6.3 Methods and material for containment and cleaning up

Cleaning methods	:	For large quantities: Pump the product. Residue: Pick up with appropriate liquid-absorbing products. The recuperated product should be disposed of according to the applicable regulations.

6.4 Reference to other sections

Information about exposure control/Personal Protective Equipment and disposal-related considerations can be found in sections 8 and 13.

SECTION 7. Handling and storage

7.1 Precautions for safe handling

Recommendations for safe handling	:	Avoid aerosol formation. Ensure proper airing of the premises, implement air-extraction measures in the workplace if necessary. Avoid contact with skin, eyes, clothes. Protection against fire and explosions: Avoid any source of ignition: heat, sparks, naked flame. The corresponding fire safety measures are to be observed.

7.2 Conditions for safe storage, including any incompatibilities

Requirements for storage areas and containers	:	Separate from powerful oxidising agents. Separate from reducing agents. Other information about storage conditions: Keep the container well sealed and in a cool, dry place. Store at room temperature. Avoid freezing.

7.3 Specific end use(s)

Authorised plant protection product	:	For a correct and safe use of the product, please refer to the conditions of use indicated on the product label.

SECTION 8. Exposure controls/personal protection

8.1 Control parameters

No professional exposure limit known.

8.2 Exposure controls

Personal Protection Equipment

RESPIRATORY PROTECTION:	Respiratory protection upon release of vapours/aerosols: Medium-efficiency particle filter for solid and liquid particles (for example EN 143 or 149, type P2 or FFP2).
HAND PROTECTION:	Chemical resistant protective gloves (EN 374). Materials also suitable for prolonged direct exposure (Recommended: protection rating 6, corresponding to a permeation time of > 480 min. in accordance with EN 374): nitrile rubber, chloroprene rubber or polyvinyl chloride (PVC), for example (among others). Additional remark: The data is based on internal checks, bibliographical data and information provided by the glove makers, or deduced from data of equivalent products. It is to be noted that in practice, the daily length of use of a protective glove against chemicals can be significantly shorter than the

	established permeation time, depending on the influence of many different factors (for example: the temperature). Given the variety of different types, it is important to observe the manufacturers' user instructions.
EYE PROTECTION:	Safety goggles with lateral protection (glasses with frames) (for example: EN 166)
PROTECTIVE CLOTHING:	Choose the corporal protection according to the activity and the type of exposure, for example an apron, safety boots, a protective suit against chemicals (in compliance with the norm EN 14605 in case of splashing or EN ISO 13982 for dust), or antistatic protective clothing.
General protection and hygiene measures:	Observe the usual precautionary measures for using chemicals. Due to the product being a dye, we recommend using a closed working suit to avoid soiling during handling. Do not eat, drink or smoke when using. Wash hands and/or face before breaks and after work. Wash contaminated clothed before reusing them.

Exposure verifications linked to the protection of the environment: Refer to section 6 for information about exposure verifications linked to the protection of the environment.

SECTION 9. Physical and chemical properties

9.1 Information on basic physical and chemical properties

Physical state:	Liquid
Colour:	Dark blue
Odour:	Product-specific
Odour threshold:	Undetermined
pH value:	3.5 - 4.5
Solidification point:	Undetermined
Boiling temperature:	100°C
Flashpoint:	> 93°C
Evaporation speed:	Undetermined
Flammability:	Non-flammable
Lower explosive limit:	The study is not necessary.
Upper explosive limit:	The study is not necessary.
Self-ignition temperature:	Given its water content, the product will not self-ignite.
Vapour pressure:	approx. 23.4 hPa (20°C), contains water

Density:	1.15 g/cm^3 (20 °C)
Relative density:	approx. 1.15 (20°C)
Relative vapour density (air):	Undetermined
Water solubility:	Miscible
(Qualitative) solvent solubility:	Ethanol - poorly soluble
Thermal decomposition:	Undetermined
Dynamic viscosity:	23 MPa.s

9.2 Other information

Flow time:	13 s
Particle size distribution:	The substance / the product is sold or used in a non-solid form or in the form of grains.

SECTION 10. Stability and reactivity

10.1 Reactivity

No dangerous reactions if the storage and handling prescriptions/indications are observed.

10.2 Chemical stability

The product is stable if the storage and handling prescriptions/indications are observed.

10.3 Possibility of hazardous reactions

No hazardous reactions if the storage and handling prescriptions are observed.

10.4 Conditions to avoid

See storage information in section 7.

10.5 Incompatible materials

Products to avoid: strong bases, oxidising agents, reducing agents.

10.6 Hazardous decomposition products

Hazardous decomposition products: No hazardous decomposition product if the storage and handling prescriptions/indications are observed.

SECTION 11. Toxicological information

11.1 Information on toxicological effects

Acute toxicity:
Evaluation of the acute toxicity:
Practically non-toxic after a single ingestion. The product has not been tested. The indication was deduced from the properties of the different components.
Experimental/calculated data:
ATE (oral ingestion): > 5 000 mg/kg
ATE (cutaneous absorption): > 5 000 mg/kg

Irritation:
Evaluation of the irritant effect:
Non-irritating to the skin. Non-irritating to the eyes. The product has not been tested. The indication was deduced from the properties of the different components.

Sensitisation of the respiratory tract:
No sensitising effect. The product has not been tested. The indication was deduced from the properties of the different components.

Mutagenicity of germ cells:
Evaluation of the mutagenic properties:

The mutagenesis tests do not indicate any genotoxic potential. The product has not been tested. The indication was deduced from the properties of the different components.

Carcinogenicity:
Evaluation of the carcinogenic properties:
The available information does not indicate any possible carcinogenic effect. The product has not been tested. The indication was deduced from the properties of the different components.

Reproductive toxicity:
Evaluation of the reproductive toxicity:
Animal tests do not give any indication as to altered fertility. The product has not been tested. The indication was deduced from the properties of the different components.

Developmental toxicity:
Evaluation of the teratogenic properties:
Animal tests do not give any indication as to a harmful effect on development/teratogenic effect. The product has not been tested. The indication was deduced from the properties of the different components.

Specific toxicity for certain target organs (single exposure):
Remarks: No available data.

Toxicity in case of repeated doses and specific toxicity for certain target organs (repeated exposure):
Evaluation of toxicity after repeated exposure:
Animal tests do not give any indication as to a harmful effect in case of repeated exposure. The product has not been tested. The indication was deduced from the properties of the different components.

Aspiration hazard:
No expected aspiration hazard.

The product may irritate the skin, respiratory tract or eyes.

SECTION 12. Ecological information

12.1. Toxicity
Evaluation of aquatic toxicity: Strong probability of the product not being harmful for aquatic organisms. The appropriate introduction of low concentrations into suitable biological treatment plants does not disturb the biological action cycle of activated sludge. The product has not been tested. The indication was deduced from the properties of the different components.

12.2. Persistence and degradability
Evaluation of biodegradability and elimination (H2O): The dye presents a moderate elimination in treatment plants by adsorption on activated sludge. Difficultly biodegradable (according to OECD criteria).

12.3. Bioaccumulative potential
Evaluation of the bioaccumulative potential: No expected accumulation in organisms.

12.4. Mobility in soil
Evaluation of the transport between environmental compartments: volatility: The substance does not evaporate from the surface of the water into the atmosphere. The ecology-related data refers to the active substance. Adsorption on soils: Adsorption onto the solid phase of the soil is expected. The ecology-related data refers to the active substance.

12.5. Results of PBT and vPvB assessment

In accordance with the Annex XII of the Regulation (EC) No. 1907/2006 concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH): The product contains no substance fulfilling the PBT (persistent/bioaccumulable/toxic) or vPvB (very persistent and very bioaccumulable)

12.6. Other adverse effects

The product contains no substance listed in the Annex I of the Regulation (EC) No. 2037/2000 on substances that deplete the ozone layer.

Additional indications

Other remarks concerning distribution and residue: The treatment, or the introduction of the waste water into a biological treatment plant, must be conducted under observance of the local and regulatory prescriptions. Other information about ecotoxicity: The product has not been tested. The ecotoxicity-relative data is deduced from the properties of the different components.

SECTION 13. Disposal considerations

13.1 Waste treatment methods

Product	:	Contact a company authorised to collect and dispose of hazardous products. Do not contaminate ponds, waterways or ditches with the product or the recipient used. Do not throw the waste down the drain.
Contaminated packaging	:	It is forbidden to reuse the packaging; rinse the container thoroughly, taking care to pour rinsing water into the sprayer reservoir. Dispose of empty packaging via the collection programs organised by the distributors that are partners of the Adivalor chain.

SECTION 14. Transport information

Transport regulation	ADR / RID / ADNR	IMDG	IATA
14.1 UN number	Non-classified in the Transport of Dangerous Goods		
14.2 UN proper shipping name	Non-classified in the Transport of Dangerous Goods		
14.3 Transport hazard class(es)	Non-classified in the Transport of Dangerous Goods		
14.4 Packing group	Non-classified in the Transport of Dangerous Goods		
14.5 Environmental hazards	None	Not a marine pollutant	None
14.6 Special precautions for user	No particular precaution (product not classified for transport).		
14.7 Transport in bulk according to Annex II of Marpol and the IBC Code	Not applicable		

SECTION 15. Regulatory information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

ICPE section : Not applicable

15.2 Chemical safety assessment

The chemical safety assessment (CSA) has not yet been completed due to the registry times

SECTION 16. Other information

Marketing authorisation No. 9300134 – BLUE LIQUID COMPO

The SDS has been revised in its entirety.

The information contained in the present safety sheet were established on the basis of our knowledge at the time of publishing of this document. This data is only given for information purposes in order to enable handling, manufacturing, storage, transport, distribution, provision, use and disposal operations in satisfactory safety conditions, and can thus not be interpreted as a guarantee or considered as quality specifications. Furthermore, this information only concerns the product expressly named and, unless specifically indicated otherwise, can not apply if the product is mixed with other substances or not be usable for any manufacturing process.
