

Efka[®] PX 4350

Product description High-molecular-weight dispersing agent

- Key benefits**
- High efficiency in stabilizing pigments
 - Demonstrates a wide compatibility with many solvent-based resin systems
 - Newtonian rheology profile even at high pigment loading
 - High efficiency with and without a pigment synergist
 - Especially suitable for optimum dispersion of β Cu-phthalocyanine pigments
 - High gloss due to excellent compatibility and improved pigment dispersion

Chemical nature Acrylic block copolymer

Properties

Physical form Clear orange to reddish liquid

Technical data (not supply specification)	Solvent	1-methoxy-2-propyl acetate
	Active ingredients	~ 51 %
	Density at 20 °C	~ 1.04 g/cm ³
	Amine value	~ 12.5 mg KOH/g
	Color	≤ 14

Application

Efka® PX 4350 is made by the Controlled Free Radical Polymerization (CFRP) technology, which allows producing polymeric dispersants with defined polymer architecture and a low polydispersity index. Efka® PX 4350 is highly suitable to be used in Resin-Containing Pigment Concentrates (RCPC) for a wide range of solvent-based industrial and automotive coatings (incl. solvent-based industrial and automotive coatings).

Formulation guideline

Calculation method to estimate the minimum required amount of active dispersant on pigment:

inorganic pigments	10–15 % on oil absorption value
organic pigments (green, blue, violet)	15–30 % on BET value
organic pigments (yellow, orange, red)	15–45 % on BET value
carbon blacks (LCF)	15–20 % on DBP value
carbon blacks (HCC)	40–50 % on DBP value

Efka® PX 4350 should be incorporated in the mill base before adding the pigments.

Storage

Efka® PX 4350 should be stored in a dry and cool place.

Validity

This Technical Data Sheet is valid for all versions of the Efka® PX 4350.

Safety

When handling this product, please comply with the advice and information given in the safety data sheet and observe protective and workplace hygiene measures adequate for handling chemicals.
