

Control Roundup Ready® Canola with Raptor® Herbicide

Volunteer Roundup Ready Canola...it seems to show up everywhere. Canola, a member of the mustard family, is fairly easy to control in most crops. What do you do if Roundup Ready canola shows up in your Roundup Ready soybeans?

The answer is Raptor® herbicide. Raptor herbicide provides excellent activity on mustard species, including canola.

Herbicide	Rate	Adjuvant	Nitrogen	Canola Stage
Raptor Herbicide plus Glyphosate	2 oz/a* See label for specifics	NIS @ 1qt/100 gal	AMS @ 17 lb/100 gal	1–5 inch

*FIFRA section 2(ee) recommendation

For use in North Dakota and Minnesota only under FIFRA section 2ee.

Best Use Recommendations

For broadspectrum grass and broadleaf weed control, apply Raptor herbicide + glyphosate in Roundup Ready Soybeans. See glyphosate label for specifics on rates and adjuvant recommendations.

- Apply Raptor herbicide prior to soybean bloom
- Raptor herbicide will not control volunteer CLEARFIELD® canola
