

Foamaster[®] MO NXZ

Product description Liquid defoamer for emulsion paints and adhesive systems.
Defoamer based on mineral oil.

Chemical nature Blend of mineral oils and non-ionic surfactants.

Properties

Physical form Turbid whitish to yellowish liquid.

Technical data (not supply specification)	Water content	~ 0.25%
	Density at 20 °C (68 °F)	~ 0.87 g/cm ³
	Viscosity	~ 450 mPa s

Application

Foamaster® MO NXZ is a defoamer for emulsion paints based on styrene-butadiene, acrylic, polyvinyl chloride and its copolymers, ethylene-vinyl acetate, vinylidene chloride and water-soluble alkyds.

Recommended concentrations

A dosage of 0.2 – 0.5% calculated on total formulation is recommended for effective defoaming. In adhesives a dosage of 0.5 - 1.0% is recommended.

Foamaster® MO NXZ can be incorporated as supplied or after emulsifying in water. Best results are obtained if half of the defoamer is added prior to grinding and the remainder at the let-down stage.

Storage

Foamaster® MO NXZ might form a slight sedimentation or phase separation during storage. The defoaming properties of Foamaster® MO NXZ are not affected, if the product is mixed thoroughly prior to use.
