

Revetment sealing made from Elastocoast® in Dagebuell (Germany)

Case Study

In order to repair a revetment the local authority “Landesbetrieb für Küstenschutz, Nationalpark und Meeresschutz”(LKN) used Elastocoast®. A layer of 15 cm was put onto the existing coastal protection and provides erosion stability thanks to its open-cell structure.

Task: Wave breaker

Bonding agent: Elastocoast® 6551/103; approx. 10 t

Year of construction: 2010

Realization: LKN

Competent authority: LKN

Planning: LKN

Area: 2,000 m²
