

Foamaster® NO 2335

Product description Defoamer based on renewable raw materials

Key benefits

- Excellent defoamer for mat- to satin-finished aqueous coatings
- Environmentally sound alternative to defoamers based on mineral oil
- Retains antifoaming properties even after prolonged storage of the finished paint
- Exceptional product stability
- Quick foam suppression when used in latex production

Chemical nature Blend of hydrophobic components and natural oils

Properties

Physical form Yellowish, hazy liquid

Technical data

(not supply specification)

Density	ISO 2811-3 (20 °C)	~ 0.9 g/cm ³
Viscosity, dynamic	ISO 2555 Brookfield 25 °C	250 – 1,500 mPa.s
Solubility	in water	insoluble

Application

Foamaster® NO 2335 is a defoamer based on renewable raw materials. It is an excellent defoamer for mat- to satin-finished aqueous coatings based on synthetic latex, plasters based on organo silicates, and aqueous adhesives.

Recommended concentrations

0.1 – 0.4 % on total formulation

When manufacturing paints, Foamaster® NO 2335 is best added during grinding in order to achieve perfect incorporation of the defoamer into the system. In emulsion polymerization, add defoamer directly on the foam.

Storage

Foamaster® NO 2335 should be stored in a cool dry place.

During storage of Foamaster® NO 2335 a slight sedimentation or phase separation might occur.

The defoaming properties of Foamaster® NO 2335 are not affected, if the product is mixed thoroughly prior to use.
