

Endura®

Fungicide

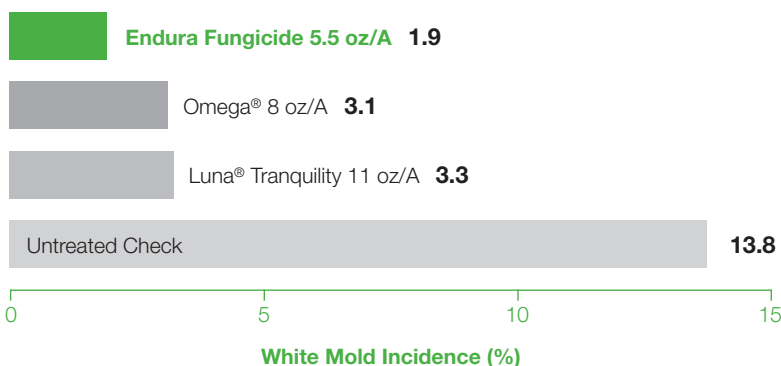

White Mold and Early Blight Management in Potatoes

Benefits of Endura® Fungicide

- Best in class white mold control helps preserve potato yield potential
- Proven control of early blight and brown spot along with Botrytis suppression
- Solo SDHI formulation allows tank mixing flexibility to manage fungicide resistance development and customizable MoA mixtures for maximum disease control

Endura fungicide offers best in class white mold control and single MoA tank mix versatility to manage resistant early blight

Maximum Potato White Mold Protection

Two-year average. 2012, 2014. Miller Research – Acequia, ID. Applications made: 2012 – first trash and FT + 14 days; 2014 – about RC and then RC + 14 days. Bravo® 1.5 pt mixed with all treatments in 2014 but not in 2012. Luna Tranquility applied with Rivet® 0.5% in 2012 with Preference® 0.5% in 2014.

Effective Early Blight Control with Endura® Fungicide Helps Protect Potato Yield Potential

Endura Fungicide 5.5 oz/A + Bravo® 1.5 pt fb Luna® Tranquility 546

Luna Tranquility 11 oz/A twice **520**

Untreated Check **505**

**Endura Fungicide 5.5 oz/A +
Bravo 1.5 pt fb Luna Tranquility 10.2**

Luna Tranquility 11 oz/A twice **10.5**

Untreated Check **35.4**

2014 Miller Research – Acequia, ID. Var = Russet Burbank. Applications made at June 20 row closer (RC), Jul 7 (RC + 14), and then Bravo Weather Stik® 1.5 pt at RC + 28 and RC + 42. Wetcit® 0.375% v/v in all treatments. Evaluation done Sept 4, 2014.

Best Use Recommendations

Use Rate: 3.5 – 10 oz/A

Maximum Applications: 2 – 4 depending rate

Maximum Rate/Season: 20 oz/A

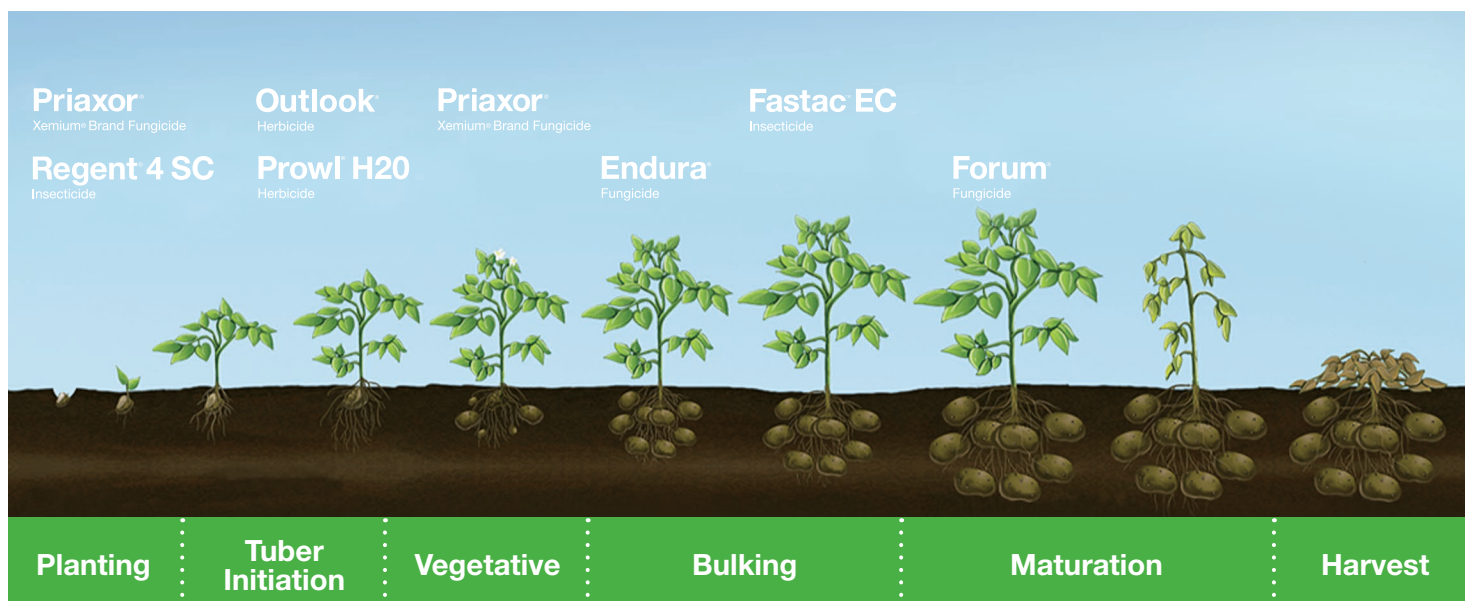

PHI: 10 Days

Carrier Volume: Ground > 10 GPA, Air > 5 GPA

Adjuvants: Non-ionic surfactant at 0.25% v/v can improve coverage and performance

Target Diseases

- White mold
- Early blight and brown spot
- Suppression of Botrytis gray mold
