

Revetment repair with Elastocoast® in Holland-on-Sea (Great Britain)

Case Study

The revetment in Holland-on-Sea has been steadily eroded by violent wave impacts. For the repair Elastocoast® was used and applied in a 20 cm thick layer. Even on a slope of 1:3, the work was completed within two days.

Task: Erosion protection of subsoil

Bonding agent: Elastocoast® 6551/100; approx. 1.5 t

Year of construction: 2008

Realization: Hesselberg Hydro Ltd. UK

Competent authority: Tendring Council

Planning: Hesselberg Hydro Ltd. UK

Area: 300 m²

Construction: Flint stones with Elastocoast®
