

FoamStar® SI 2227

Product description

Defoamer

- Defoamer and anti-foaming agent for emulsion paints and polymer emulsions
- Excellent foam suppression during polymerization and also during subsequent processing of the polymer emulsions
- Good spontaneous and a good long-term defoaming effect

Chemical nature

Blend of special fat derivatives and alkylene oxide derivatives with hydrocarbons, containing a small amount of silicone

Properties

Physical form

Cloudy pale yellow liquid

Technical data

(not supply specification)

Active substance	BASF method	99.0 – 100.0 %
Density	ISO 2811-3 (20 °C)	0.900 – 0.940 g/cm ³
Viscosity, dynamic	ISO 2555 (23 °C)	100 - 500 mPa.s

Application

FoamStar® SI 2227, even with regard to the elimination of micro foam, has an excellent anti-foaming effect when incorporated into emulsion paints based on fine-particle-size styrene/acrylic copolymers, vinyl acetate/acrylic copolymers, pure acrylics, etc. Long-term evaluations showed no deterioration of the defoaming effect. FoamStar® SI 2227 is excellently suited for incorporation into emulsion paints containing low pigment quantities (high-gloss emulsion paints).

Recommended concentrations

0.2 – 0.7 % on total formulation

Storage

FoamStar® SI 2227 should be stored in a cool dry place.

During storage of FoamStar® SI 2227 a slight sedimentation or phase separation might occur. The defoaming properties of FoamStar® SI 2227 are not affected, if the product is mixed thoroughly prior to use.

Validity

This Technical Data Sheet is valid for all versions of the FoamStar® SI 2227.

Safety

When handling this product, please comply with the advice and information given in the safety data sheet and observe protective and workplace hygiene measures adequate for handling chemicals.

Note
